#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over White (4,972,494) in view of Arnarson (5,184,733).

Regarding claims 1 and 4, White discloses an image processing method and system comprising:

a camera for picking up a workpiece (fig.1, element 12 and fig.2, element 74);

and

an image processing apparatus for capturing image pickup data of the workpiece picked up by said camera and performing image processing (fig.1, element 140),

said image processing apparatus including a trigger receiving section for receiving a trigger from an outside (fig.1, element 140 receives a trigger sent from the outside via element 147),

an image processing section for performing image processing with respect to each the image pickup data picked up by the camera by the trigger from the outside (fig.1, element 140 receives and processes the image data picked up by camera 12, along with the outside trigger via element 147), and

a statistical processing section for performing statistical processing of each image processing result data from the image processing section (col.4, ln.12-17).

White does not specifically disclose a trigger generation section for generating a predetermined number of internal triggers at predetermined intervals when said trigger receiving section receives the trigger from the outside. However, Arnarson discloses the implementation of generation of predetermined number of internal triggers at predetermined intervals (col.1, ln.66 to col.2, ln.1 and col.2, ln.48-56). Therefore, it would have been obvious to one of ordinary skill in the art to combine the teachings of White and Arnarson, as a whole, for accurately, efficiently processing images of objects in manufacturing applications (col.1, ln.60-63 and col.3, ln.67 to col.4, ln.3).

Note claims 2, 3, 5 and 6 have similar corresponding elements.
